Indexed in Current Contents

Subiecta

Addition theorems 247
Aldehydes, polyenic, $n\pi^*$ excited state of ~ 199
Atomic pseudopotentials, theoretical determination of ~ 283
Atoms in molecules 101
Aza-aromatics, protonation of ~ 223

Bessel functions, Slater type s-orbitals, addition theorems of ~ 273
Boron containing radicals 355

Continuum wave functions, non-relativistic ~ 185
Copper (II) 131
Cyclic conjugated hydrocarbons 121
1,3-cyclohexadiene and 1,3,5-cycloheptatriene, transition state geometry of ~ 241

Density matrix LCAO-MO-SCF 211
Dimethyl phosphate anion, metal ion interaction with ~ 71
Dipeptide model 109
Direct energy minimization 211

Electron density distribution in atoms 159
Electrophilic addition 21
Energy band structure of polymers 139
Ethylene, reaction of fluorine with ~ 21
Exchange interaction 131
Excited states 49

Fields, translations, rotations of ~ 247
First row atoms, excitation energies of ~ 303
Fluorine, reaction with ethylene 21

Gegenbauer polynomials, spherical harmonics, expansions in ~ 273
Graph theory 37
Green's functions 149, 311

Hemoglobin, isomer shifts of Fe^{57} in ~ 65
Homoconjugation 241
Hydrocarbons, cyclic conjugated ~, stabilization energy of ~ 121

Ice-like structures 85

Independent electron pair approach 303
Infinite polyene chain 139
Irreversible processes 167

Localized molecular orbitals 9
Localized orbitals 49

Magnetic susceptibility 131
MC-LCAO-MO method, semi-empirical 327
Myoglobin, isomer shifts of Fe^{57} in ~ 65

NaCl 231
Naphthalene, triplet-triplet transitions 327
Nucleotide-metal ion interaction 71
Numerical integration 311

One-dimensional crystals 139
Oximes 79

Photochemical isomerism 79
Polyacenes, molecular geometry prediction of ~ 327
Polyenes, α,ω-substituted 1
Positive ions 49

SCF-Xα-scattered wave method 231
Spherical harmonics, expansions in ~ 247
Spherical harmonics, expansions of functions r^N in ~ 261
Statistical exchange 231
Statistical order/disorder 167
Substituted polyenes 1
Sulphilimines 115
Symmetric group 167

Theoretical bond energies 9
Thermal sigmatropic hydrogen shifts 241
Topological studies in organic chemistry 37
Torsional potential function $V(\phi)$ 109
Two-centre molecular integrals 311

Valence bond theory, second quantization formulation of ~ 341
Valence shell polarization 49
Vertical ionization potentials 149

Water lattices 85

Zeta function 273

Introducing the 1st multidisciplinary guide to review articles

INDEX TO SCIENTIFIC REVIEWS™

Now you can easily find review articles on any subject in science. Each year the *Index to Scientific Reviews (ISR™)* will index over 16,000 reviews selected from more than 2,700 of the world's most important journals.

Broad Coverage
Over 100 disciplines in every area of science are covered:

- **Agricultural, Biological & Environmental Sciences**
- **Engineering, Technology & Applied Sciences**
- **Medical & Life Sciences**
- **Physical & Chemical Sciences**
- **Social & Behavioral Sciences**

So you won't have to go through separate references to locate review articles for subjects in any of these areas. With one index—the *ISR*—you can cross disciplinary lines and retrieve these key articles no matter where they were published in the literature. The *ISR* will even cover the literature published in quarterly and annual "review" publications (e.g., *Annual Review of Genetics*).

Effectively Indexed
The *Index to Scientific Reviews* makes it easy to find the review articles you need. Search by authors, title words and phrases, and organizations. Or use the *ISR*'s citation index—it lets you start a search with previously published material relevant to a subject and find more recent articles through citation relationships.

Highly Current
The *ISR* indexes the review literature on a calendar year basis. A soft-bound semiannual issue (covering January to June) will be available each September, and a hard-bound annual cumulation will appear the following April. So you can find new articles while they're still new.

What's It To You?
The *ISR* is a quick and easy way to find: 1) summaries of knowledge in fields unfamiliar to you, 2) those key articles you need to start a really thorough literature search, 3) the most recent review articles on any subject in science.

For More Information . . .
The first *ISR* annual cumulation (covering the 1974 literature) will soon be out, so get the full story on the *Index to Scientific Reviews* now. Just fill in the coupon, and mail it today. ©1974 ISI

I'd like to know more about the *Index to Scientific Reviews*™. Please send full information for myself and my library.

Instructions to Authors

Manuscripts should be *submitted in duplicate*, typed in double-line spacing on one side of the paper only. Form and contents should be carefully checked to exclude the need for corrections in proof. The author should mark in the margin where diagrams and tables should be inserted.

To speed up publication, authors will receive only *one set of proofs:* provisionally numbered page proofs. Authors are requested to correct typographical errors only; they will be charged for corrections involving changes, additions, or deletions to the original manuscript.

Formulae should be typewritten whenever possible, special attention being given to the placing of indices and exponents so that they are recognizable as such even though there is no difference in size. Formulae should preferably be written in a "linear" form e. g. $\exp(-\varepsilon/kT)$ instead of $e^{-\frac{\varepsilon}{kT}}$). Special typefaces (Greek, Script) should be shown by underlining in color. To avoid confusing the printer, please use red for Greek and green for Script, and underline in brown for bold face.

The following are *frequently confused:*

$\cup, \mathrm{u}, \bigcup, U$; $\circ, o, O, 0$; $\times, x, X, \varkappa, \chi$; $\vee, v, \nu$; $\theta, \Theta, \phi, \varphi, \Phi, \varnothing, \emptyset$; ψ, Ψ; $\varepsilon, \in$; I, l:

a', a^1; the symbol a and the indefinite article a;

also the handwritten Roman letters:

c, C; e, l; I, J; k, K; o, O; p, P; s, S; u, U; v, V; w, W; x, X; z, Z;

Please take care to distinguish them in some way: preferably small letters should be underlined once and capital letters twice.

The papers should be preceded by an *English summary* of not more than 100 words. Papers not written in English should have an English translation of the title.

Immediately following the summary, a list of *key words* (not exceeding five items normally) should be supplied for subject indexing.

Literature references should be numbered and listed at the end of the paper. They should be cited as follows: *journal papers* — names and initials of all authors, journal with abbreviations according to the I. U. P. A. C. list (Chemical Abstracts, Vol. 55, 1961), volume and page number, year in parentheses; *books* — names of authors, full title, edition, place, publisher and year. References should be cited in the text by number.

Figures, graphs, tables and structural formulae should be separated from the text and be numbered. Original drawings and graphs should be made in Indian ink with lines of uniform thickness. Authors should keep in mind that drawings will be reduced to a size not exceeding 12 × 19,5 cm. In general it should be assumed that the same degree of reduction will apply to all figures in the same paper. Inscriptions should allow for any reduction in scale — a capital letter should be about 1.8 mm in height in the final version. Computer print-outs should be black and evenly printed to allow direct reproduction.

Captions, which should be brief, should be typed separately and attached to the manuscript.
